SUMMARY

Junior full-stack developer and BSc Software Engineering graduate who designs and ships complete web applications end to end. Founded AfriCarbon and built its entire software stack solo - a customer-facing storefront and a production, sales, and profit management system a real business runs on daily. Comfortable across React and TypeScript frontends and Supabase/PostgreSQL backends, using AI-assisted workflows to build and iterate quickly.

EXPERIENCE

Founder & Full-Stack Developer - AfriCarbon

2024 - Present | Liberia

- Designed, built, and deployed the company's full software stack solo - from database schema to UI to production deployment.
- Built Charcoal Manager, a production, sales, and profit tracking system the business relies on for daily operations, turning live operational data into clear reporting.
- Delivered it as an installable, mobile-first PWA with user authentication, a Supabase backend, and a React/TypeScript frontend hosted on Vercel.
- Built and shipped AfriCarbon's public storefront to present the charcoal brand to international buyers.

PROJECTS

Charcoal Manager

charcoal-manager.afropinnacle.com

React · TypeScript · Supabase · PWA · Vercel

- Full-stack business platform tracking production, sales, and profit in real time.

AfriCarbon

africarbon.afropinnacle.com

React · TypeScript

- Fast, polished storefront presenting a Liberian charcoal export brand to international buyers.
